

Use a SQL Worksheet in Snowsight to run the following. We created `test_database` and in a previous assignment, but if you do not have them, run the following code to create them,

```
CREATE DATABASE test_database;  
CREATE SCHEMA test_database.test_schema;
```

Use the `test_database` and `test_schema` to create the `test_table` and insert the data,

```
USE DATABASE test_database;  
USE SCHEMA test_schema;  
  
CREATE TABLE TEST_TABLE (  
    TEST_NUMBER NUMBER,  
    TEST_VARCHAR VARCHAR,  
    TEST_BOOLEAN BOOLEAN,  
    TEST_DATE DATE,  
    TEST_VARIANT VARIANT,  
    TEST_GEOGRAPHY GEOGRAPHY  
);  
  
INSERT INTO TEST_DATABASE.TEST_SCHEMA.TEST_TABLE  
VALUES  
(28, 'ha!', True, '2024-01-01', NULL, NULL);
```
