

This is not mandatory reading, but here's the code we'll run in the "Snowflake Cortex LLM Functions" videos. It may come in handy when you're doing the associated hands-on assignment.

```
--> use the mistral-7b model and Snowflake Cortex Complete to ask a question
SELECT SNOWFLAKE.CORTEX.COMPLETE(
    'mistral-7b', 'What are three reasons that Snowflake is positioned to become the
go-to data platform?');
```

```
--> now send the result to the Snowflake Cortex Summarize function
SELECT SNOWFLAKE.CORTEX.SUMMARIZE(SNOWFLAKE.CORTEX.COMPLETE(
    'mistral-7b', 'What are three reasons that Snowflake is positioned to become the
go-to data platform?'));
```

```
--> run Snowflake Cortex Complete on multiple rows at once
SELECT SNOWFLAKE.CORTEX.COMPLETE(
    'mistral-7b',
    CONCAT('Tell me why this food is tasty: ', menu_item_name)
) FROM FROSTBYTE_TASTY_BYTES.RAW_POS.MENU LIMIT 5;
```

```
--> check out what the table of prompts we're feeding to Complete (roughly) looks
like
SELECT CONCAT('Tell me why this food is tasty: ', menu_item_name)
FROM FROSTBYTE_TASTY_BYTES.RAW_POS.MENU LIMIT 5;
```

```
--> give Snowflake Cortex Complete a prompt with history
SELECT SNOWFLAKE.CORTEX.COMPLETE(
    'mistral-7b', -- the model you want to use
    [
        {'role': 'system',
         'content': 'Analyze this Snowflake review and determine the overall sentiment.
Answer with just \"Positive\", \"Negative\", or \"Neutral\"' },
        {'role': 'user',
         'content': 'I love Snowflake because it is so simple to use.'}
    ], -- the array with the prompt history, and your new prompt
    {} -- An empty object of options (we're not specify additional options here)
) AS response;
```

--> give Snowflake Cortex Complete a prompt with a lengthier history

```
SELECT SNOWFLAKE.CORTEX.COMPLETE(  
    'mistral-7b',  
    [  
        {'role': 'system',  
         'content': 'Analyze this Snowflake review and determine the overall sentiment.  
Answer with just \"Positive\", \"Negative\", or \"Neutral\"'},  
        {'role': 'user',  
         'content': 'I love Snowflake because it is so simple to use.'},  
        {'role': 'assistant',  
         'content': 'Positive. The review expresses a positive sentiment towards  
Snowflake, specifically mentioning that it is \"so simple to use.\"'},  
        {'role': 'user',  
         'content': 'Based on other information you know about Snowflake, explain why  
the reviewer might feel they way they do.'}  
    ], -- the array with the prompt history, and your new prompt  
    {} -- An empty object of options (we're not specify additional options here)  
) AS response;
```
